

Chlorhexidine Gluconate (CHX) Oral Rinse

This is a pre-mixed prescription antiseptic rinse to assist in the treatment of periodontal (gum) disease by reducing swelling & redness of gum tissue by decreasing bacteria present in the oral cavity.

Staining of teeth may occur with this rinse but usually the stains can be removed by the dentist or hygienist.

Some alterations in taste are possible, however with continued use this usually improves.

DIRECTIONS FOR USE:

Swish with ½ oz. (inside of cap is pre-measured) for 30 seconds then expectorate (spit). Use once a day before bedtime unless instructed otherwise.

See manufacturer's label for complete information.
